14.1) AIM: Scrape product data (name, price, rating) from an e-commerce website using BeautifulSoup.

PROGRAM:

```
import requests
from bs4 import BeautifulSoup

url = 'https://www.amazon.com/dp/B098FKXT8L'
headers = {'User-Agent': 'Mozilla/5.0'}

resp = requests.get(url, headers=headers)
soup = BeautifulSoup(resp.text, 'html')

name = soup.select_one('#productTitle').get_text(strip=True)
price = soup.select_one('#corePrice_feature_div span.a-price')
        .get_text(strip=True)
rating = soup.select_one('#crPopOver')['title'].split(
        'out of')[0]

print(name, price, rating)
```

OUTPUT:

Bose QuietComfort 45 Bluetooth Headphones \$ 329.00 4.6

4.2) AIM: Extract tabular data from a webpage & convert it to a Dataframe.

PROGRAM:

```
import requests
import pandas as pd
from bs4 import BeautifulSoup

url = 'https://example.com/table-page.html'
resp = requests.get(url)
soup = BeautifulSoup(resp.text, 'html.parser')

table = soup.find('table', {'id': 'product-table'})
headers = [th.text for th in table.find_all('th')]

rows = [
    [td.text for td in tr.find_all('td')]
    for tr in table.find('tbody').find_all('tr')
]

df = pd.DataFrame(rows, columns = headers)
print(df.head(1))
```

OUTPUT:

	Product	Price	Rating
0	Widget A	\$ 10.99	4.3
1	Widget B	\$ 12.49	4.7
